

# Curriculum Vitae

Alessandro Cosentino

November 14, 2014

## Education

### Ph.D. in Computer Science

*University of Waterloo — January '10 – present*

Expected graduation date: April '15

Fellow of the **Institute for Quantum Computing**

Recipient of a **David R. Cheriton Graduate Scholarship**, awarded annually to forty to seventy-five full-time University of Waterloo Computer Science graduate students on the basis of scholastic excellence and evidence of research potential.

### M.Math in Computer Science

*University of Pisa — February '09*

Final score: 110/110 *cum laude*

### B.Math in Computer Science

*University of Pisa — July '06*

Final score: 110/110 *cum laude*

## Research Interests

My research is in theoretical computer science, more specifically in quantum information theory.

The topic of my PhD thesis is on *quantum state distinguishability* and the application of *convex programming* to answer several fundamental open questions in *quantum information theory*.

I am also interested in structural complexity theory, both classical and quantum.

## Publications

- Alessandro Cosentino, Robin Kothari, and John Watrous. Query-witness tradeoffs in quantum computation. manuscript, November 2014
- Somshubhro Bandyopadhyay, Alessandro Cosentino, Nathaniel Johnston, Vincent Russo, John Watrous, and Nengkun Yu. Limitations on separable measurements by convex optimization. preprint, arXiv:1408.6981v1 [quant-ph], August 2014
- Alessandro Cosentino and Vincent Russo. Small sets of locally indistinguishable orthogonal maximally entangled states. *Quantum Information & Computation*, 14(13&14):1098–1106, 2014
- Alessandro Cosentino, Robin Kothari, and Adam Paetznick. Dequantizing Read-once Quantum Formulas. In *Simone Severini and Fernando Brandao, editors, 8th Conference on the Theory of Quantum Computation, Communication and Cryptography (TQC 2013), volume 22 of Leibniz International Proceedings in Informatics (LIPIcs)*, pages 80–92, Dagstuhl, Germany, 2013. Schloss Dagstuhl–Leibniz-Zentrum fuer Informatik
- Alessandro Cosentino. Positive-partial-transpose-indistinguishable states via semidefinite programming. *Phys. Rev. A*, 87:012321, Jan 2013
- Alessandro Cosentino and Simone Severini. Weight of quadratic forms and graph states. *Phys. Rev. A*, 80:052309, Nov 2009

## Exchange programs

### Research intern

*LIAFA, Université Paris Diderot — February '13 – April '13*

### Erasmus scholar

*Aarhus University — September '07 – March '08*

## Teaching Experience

### Teaching assistant

*University of Waterloo — 2010 – 2013*

- Theory of Quantum Information (graduate course)
- Data Structures and Data Management
- Algorithms
- Introduction to Computer Science

## UNIX Consultant

*Math Faculty Computing Facility, University of Waterloo — Winter '12 and Fall '12*

## Other Experience

**Outreach Program for Women org coordinator and mentor** – *Summer '14*

**Google Code-in org administrator** – *Winter '12*

**Google Summer of Code student developer** – *Summer '12*

**Season of KDE student developer** – *Summer '11*

## Professional Service

### Technical Reviewer

- *APS Physical Review A*
- *IEEE Transactions on Information Theory*
- *XVII Conference on Quantum Information Processing (2014).*

## Technical Skills

- Research tools: LaTeX, MATLAB/Octave and framework CVX for convex programming;
- Web programming Languages: PHP, HTML5, Javascript, CSS;
- Other technologies: RSS and Atom standards, Git.
